PROFESSIONAL SUMMARY

Results-driven **Java Full Stack Developer** with 2.5 years of experience architecting and delivering enterprise-grade web applications, scalable backend microservices, secure RESTful APIs, and responsive front-end interfaces. Specialized in core backend engineering using **Java 17+**, **Spring Boot 3.x**, **Spring Cloud**, **Spring Data JPA**, **Hibernate**, and **MySQL**, complemented by dynamic frontend development with **JavaScript** and **React.js**. Experienced in designing relational database schemas, implementing robust authentication systems (**Spring Security**, **JWT**, **OAuth2**, **RBAC**), writing comprehensive test suites (**JUnit 5**, **Mockito**), and automating cloud deployments (**Docker**, **GitHub Actions**, **AWS**). Proficient with modern AI-assisted engineering tools (**GitHub Copilot**, **Cursor**, **Claude Code**) for rapid boilerplate generation, unit test creation, and debugging while strictly adhering to **SOLID principles**, clean architecture, and code quality standards.

CORE COMPETENCIES

- | | | |
|---------------------------------|------------------------------------|--------------------------------|
| • Full Stack Web Development | • REST API Architecture & Security | • Microservices Architecture |
| • Spring Boot & Spring Data JPA | • Relational Database Engineering | • Spring Security & JWT / RBAC |
| • Cloud Deployment (AWS) | • Docker & CI/CD Pipelines | • Unit Testing & Clean Code |

TECHNICAL SKILLS

Backend Languages & Frameworks:	Java (Java 17/8, Core & Advanced Java, OOP), Spring Boot 3.x, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs, Lombok
Microservices & Cloud Patterns:	Microservices Architecture, Spring Cloud (API Gateway, Eureka / Service Discovery, Config Server), Feign Client, Circuit Breaker (Resilience4j)
Frontend Technologies:	JavaScript (ES6+), React.js
Databases & ORM:	MySQL, PostgreSQL, Relational Database Design, Query Optimization, Database Indexing, Connection Pooling
Security & Access Control:	Spring Security, JWT Authentication, OAuth2, Role-Based Access Control (RBAC), API Security
Messaging & Architecture:	Event-Driven Architecture, Apache Kafka, RabbitMQ, Clean Architecture, REST Architecture
Testing & Code Quality:	JUnit 5, Mockito, Unit & Integration Testing, SonarQube, Checkstyle, Code Reviews, SOLID Principles, Design Patterns
Cloud & DevOps:	AWS (EC2, S3, RDS, Cognito), Docker, CI/CD Pipelines (GitHub Actions), Maven, Gradle, Linux
Developer Tools & AI:	Git, GitHub, Postman, IntelliJ IDEA, Jira, Agile/Scrum, AI Coding Assistants (GitHub Copilot, Cursor, Claude Code)

PROFESSIONAL EXPERIENCE

Java Full Stack Developer — Voltuswave Technologies India Pvt. Ltd. Feb 2024 – Present | Hyderabad, India

- Backend REST API Development:** Engineered and maintained scalable RESTful APIs and backend business logic using **Java 17**, **Spring Boot 3.x**, and **Spring Data JPA (Hibernate)** with **MySQL**, supporting high-volume multi-tenant workflows.
- Frontend Integration:** Developed dynamic, responsive user interface components and integrated backend REST services using **JavaScript** and **React.js**, delivering seamless user interactions.
- Authentication & Security:** Implemented enterprise authentication and authorization using **Spring Security**, **JWT** tokens, and Role-Based Access Control (**RBAC**), ensuring strict data security and tenant isolation across enterprise accounts.
- Database Engineering & Optimization:** Designed relational database schemas in **MySQL**, writing complex SQL queries, applying compound indexing, and optimizing execution plans to reduce query latency.
- Testing & Code Quality:** Authored comprehensive unit and integration test suites using **JUnit 5** and **Mockito**; adhered strictly to **SOLID principles**, design patterns, and static analysis tools (**SonarQube/Checkstyle**) to maintain zero-defect code standards.
- Containerization & CI/CD:** Containerized Spring Boot backend services using **Docker** and automated build, test, and zero-downtime deployment pipelines using **GitHub Actions** CI/CD on **AWS**.
- AI-Assisted Workflow:** Routinely utilized AI coding assistants (**GitHub Copilot**, **Claude Code**, **Cursor**) for boilerplate code generation, test scaffolding, and debugging — validating all generated code for accuracy and security before peer review.
- Agile Collaboration:** Actively participated in daily stand-ups, sprint planning, and peer code reviews in two-week Agile cycles, collaborating with cross-functional teams to deliver production-ready features.

KEY PROJECTS

Voltusfreight — Multi-Tenant Freight Forwarding Platform

Tech Stack: Java, Spring Boot, React.js, JavaScript, Spring Security, Hibernate, MySQL, AWS Cognito, Docker, GitHub Actions

- **Authentication & Access Control:** Architected end-to-end authentication and authorization (signup, login, RBAC) using AWS Cognito and Spring Security, enabling secure token management, session control, and strict tenant-isolated data access across multi-tenant workflows.
- **Activity Tracking & Dashboards:** Implemented user activity tracking and analytics dashboards capturing post-login actions, session duration, and behavioral patterns — providing administrators with operational visibility and business insights.
- **Frontend UI Engineering:** Developed interactive, component-driven user interfaces using React.js and JavaScript, integrating RESTful API endpoints for seamless tenant workflows.
- **RESTful API & Database Engineering:** Built RESTful APIs with Java and Spring Boot for shipment, quote, and document workflows; modeled MySQL schemas using Spring Data JPA (Hibernate) with tenant-scoped queries and database indexing to enforce data isolation and optimize query performance.
- **CI/CD & Cloud Deployment:** Containerized Spring Boot backend services with Docker and deployed to AWS, automating builds, tests, and zero-downtime releases via GitHub Actions CI/CD pipelines.

VoltusCRM — Freight Forwarding CRM Platform

Tech Stack: Java, Spring Boot, React.js, JavaScript, Spring Security, Spring Data JPA, Hibernate, MySQL, AWS, Docker, GitHub Actions

- **Lead & Shipper Account Management:** Architected customer relationship & lead management module by building RESTful APIs with Java and Spring Boot to manage shipper accounts, sales pipelines, and interaction histories.
- **Opportunity & Deal Automation:** Engineered an opportunity management & deal pipeline module using Java, Spring Boot, and Spring Data JPA to track lead stages, sales milestones, and automated deal progression.
- **Interactive Analytics Dashboards:** Developed interactive UI analytics dashboards using React.js and JavaScript, providing sales teams with real-time pipeline visibility, lead conversion metrics, and revenue forecasts.
- **Enterprise Security & RBAC:** Implemented secure role-based access control (RBAC) and JWT authentication with Spring Security, ensuring strict tenant data isolation and access control across sales teams and enterprise clients.
- **Automated Testing & Deployment:** Containerized backend services using Docker and established GitHub Actions CI/CD pipelines for automated testing, build verification, and zero-downtime deployments on AWS.

EDUCATION

B.E. in Civil Engineering — Chaitanya Bharathi Institute of Technology (CBIT), Hyderabad	May 2023
Full Stack Development (Certification) — Nxtwave Disruptive Technologies, Hyderabad	Jan 2024
