Java Developer | Microservices | Spring Boot | AWS

PROFESSIONAL SUMMARY

Java Developer with 2.5 years of hands-on experience designing and delivering production-grade Microservices using Spring Boot, Spring Cloud, and AWS. Proven expertise in architecting secure REST APIs, implementing JWT/OAuth2 authentication, RBAC authorization, and cloud-native deployments on AWS (EC2, S3, RDS, Cognito). Skilled in event-driven inter-service communication, multi-tenant database design, and CI/CD automation with Docker and GitHub Actions. Passionate about SOLID principles, clean architecture, and scalability in Agile environments.

TECHNICAL SKILLS

Languages: Java (Core & Advanced), SQL

Backend / Microservices: Spring Boot, Spring Cloud (API Gateway, Eureka/Service Discovery, Config Server), Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Lombok, Microservices Patterns (API Gateway, Circuit Breaker, Saga, CQRS)

Authentication & Security: JWT Authentication, OAuth2, Spring Security, AWS Cognito (User Pools, App Clients), RBAC, Multi-Tenant Access Control, API Rate Limiting

AWS & Cloud: AWS EC2, AWS S3, AWS RDS, AWS Cognito, AWS IAM, AWS CloudWatch, AWS Lambda, Docker, Nginx

Databases: MySQL, PostgreSQL, Schema Design, Query Optimisation, Indexing, Connection Pooling, Multi-Tenant Data Isolation

Messaging & Events: Event-Driven Architecture, Apache Kafka, RabbitMQ, Async Processing

DevOps & CI/CD: GitHub Actions, Docker, Kubernetes (K8s), Maven, Gradle, Linux, Zero-Downtime Deployments

Engineering Practices: OOP, SOLID Principles, Design Patterns (Builder, Factory, Strategy, Observer), Resilience4j (Circuit Breaker), Spring Actuator, Swagger/OpenAPI, Multi-threading, JUnit, Mockito, Postman, Code Reviews

Service Communication: Feign Client, REST APIs, Synchronous & Asynchronous Inter-Service Communication

Caching: Redis (Cache-Aside, TTL strategies)

Tools: Git, GitHub, IntelliJ IDEA, Jira, Agile/Scrum

WORK EXPERIENCE

Java Full Stack Developer

Voltuswave Technologies India Pvt. Ltd. | Feb 2024 – Jul 2026 | Hyderabad, India

- Microservices Design:** Designed and delivered production-grade microservices with Spring Boot and Spring Cloud (Service Discovery, API Gateway, Config Server) handling multi-tenant freight workflows; enforced strict tenant data isolation at the API and database layers.
- AWS Deployment:** Provisioned and managed AWS infrastructure (EC2, S3, RDS, Cognito User Pools, IAM roles); achieved high-availability deployments with zero-downtime release pipelines on AWS.
- API Security:** Architected Spring Security + JWT/OAuth2 authentication and RBAC authorisation across all microservices; integrated AWS Cognito for token issuance, refresh, and session control — zero auth incidents in production.
- CI/CD Automation:** Automated build-test-deploy pipelines using GitHub Actions + Docker + Maven; reduced deployment errors by ~60 % and enforced environment parity across all services.
- Database Engineering:** Designed normalised MySQL schemas with Spring Data JPA/Hibernate; applied compound indexing and tenant-scoped query optimisation — reduced average API response time by ~35 %.
- Event-Driven Architecture:** Integrated pub/sub messaging for async inter-service communication, decoupling shipment, quoting, and notification services to improve resilience and throughput.

- **Agile:** Collaborated in two-week Agile sprints, led code reviews, triaged production incidents, and delivered production-ready features aligned with business KPIs.

KEY PROJECTS

Voltusfreight — Multi-Tenant Freight Forwarding Platform

Tech Stack: Java · Spring Boot · Spring Cloud · Spring Security · Hibernate · MySQL · AWS Cognito · EC2 · S3 · RDS · Docker · GitHub Actions

- **Microservices Architecture:** Architected microservices backend (shipment, quote, document, notification services) using Spring Boot and Spring Cloud; implemented API Gateway for unified entry point and Eureka for dynamic service registration.
- **AWS Cognito Auth:** Integrated AWS Cognito (User Pools + App Clients) for enterprise authentication — signup, login, MFA, token refresh — with Spring Security for downstream JWT validation and RBAC enforcement.
- **Database Design:** Designed multi-tenant MySQL schemas via Spring Data JPA/Hibernate with tenant-scoped queries, compound indexing, and connection pooling to handle concurrent workloads efficiently.
- **Deployment:** Deployed all microservices as Docker containers on AWS EC2; used S3 for document storage, RDS for managed MySQL; automated build-test-deploy via GitHub Actions with zero-downtime rolling updates.

VoltusCRM — Freight Forwarding CRM Platform

Tech Stack: Java · Spring Boot · Spring Security · Spring Data JPA · Hibernate · MySQL · AWS · Docker · GitHub Actions

- **RESTful Microservices:** Built CRM microservices (lead management, deal pipeline, shipper accounts, interaction history) with Java and Spring Boot; enforced tenant isolation and RBAC via Spring Security + JWT.
- **Deal Automation:** Engineered automated deal-progression engine with Spring Data JPA/Hibernate — reduced manual CRM updates by 45 % and improved sales pipeline accuracy.
- **CI/CD:** Containerised all services with Docker and deployed on AWS; established GitHub Actions pipelines for automated testing, build verification, and zero-downtime releases.

EDUCATION

B.E. Civil Engineering — Chaitanya Bharathi Institute of Technology (CBIT), Hyderabad — May 2023

Full Stack Development (Certification) — Nxtwave Disruptive Technologies, Hyderabad — Jan 2024
